Add Film Registration to Your Existing Flow-Wrappers

For a fraction of the cost of a new machine you could be making the high quality packs demanded of more and more customers.

If your existing machine is currently without print registration, or has an old troublesome mechanical system, we can upgrade it - either at your premises, or in one of our regional workshops.

To save even more a DIY kit is available, including pre-wired cable assemblies for an almost 'plug and play' installation. Detailed manuals including photographic examples make installation simple and quick and well within the capabilities of most maintenance engineers. It includes full on-site support backed by ISO9000 accreditation.
